

Birlasoft's JD Edwards Data Conversion Framework

Migrate Data to JD Edwards with ease

Importance of Data in an organizational setup and its correct conversion when migrating to or upgrading a new ERP system cannot be overstated. However, data conversion and migration is a complex task. A lot of factors such as mismatching data formats, non-standard systems, improper mapping of data with existing data, existing bad data of legacy system, etc. need to be considered before data conversion and migration. It involves careful extraction of data from multiple sources, normalizing it and then transforming it. Non-existence of processes while performing data conversion increases lead time of conversion and can lead to loss of business and high cost of maintaining multiple systems.

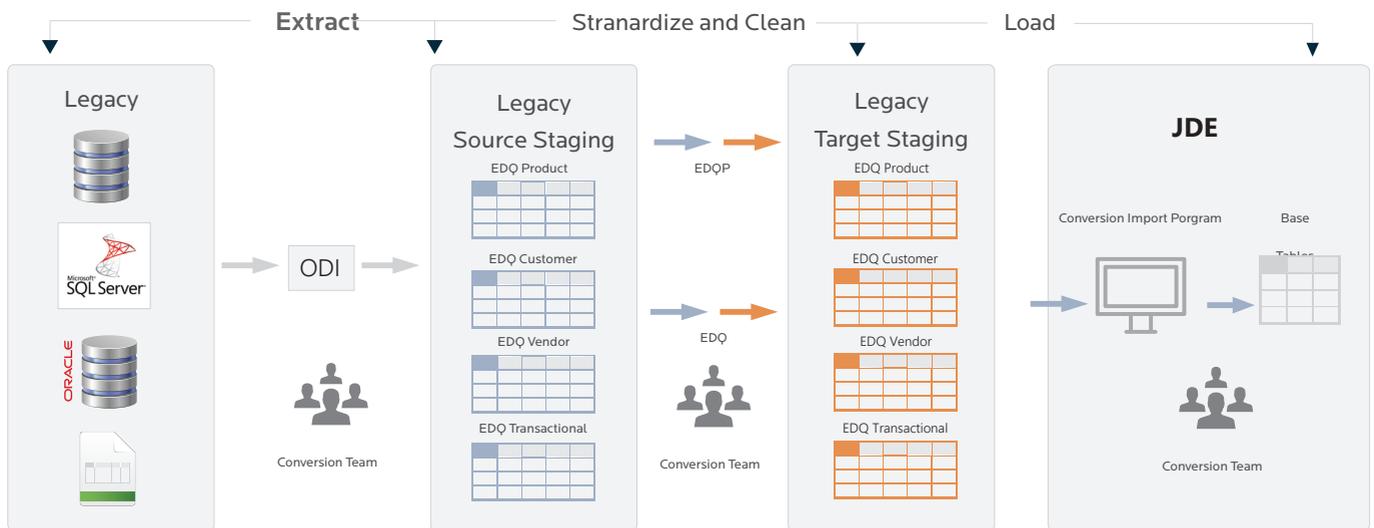

Features of Birlasoft's Data Conversion Framework

- Pre-built Staging Table Template for all JDE conversion entities
- Pre-built adapter for de-duplication.
- Pre-built adapter for data profiling, auditing and validation.
- Best Practice process to perform mapping
- Best Practice process of data validation and load.

Birlasoft's Solution

At Birlasoft, we realize that the three main elements of a successful data conversion framework are People, Process and Technology. We leverage our industry expertise and Oracle knowledge to simplify the complex exercise of data conversion and migration for our customers. Our Data Conversion Framework comprising of pre-built adaptors and industry focused methodologies utilize the right tools- ODI, EDQ for data extraction, standardization and delivers successfully by defining streamlined process of conversion of data mapping, validation and auditing and loading.

Data Conversion Framework Architecture

Benefits of Birlasoft's Data Conversion Framework

- 60% faster data conversion
- 40% reduction in costs
- Delivery within 12 weeks
