

BIRLASOFT COGITO™

Make AI work as one enterprise.

Birlasoft Cogito™ is an enterprise agentic AI platform that connects agents, models, tools, workflows and enterprise context to accelerate software delivery, improve business processes and strengthen IT operations. It brings fragmented AI initiatives together with shared context, security and governance, so early successes become repeatable results across the enterprise.

One platform across business engineering and operations

How It Benefits Customers

Up to **60%**
faster software delivery

Up to **40%**
greater business process efficiency

Up to **40%**
faster modernization

Reusable agents and workflows

Birlasoft Cogito brings together agents across software engineering and industry workflows. Examples include predefined software engineering and industry workflows spanning payment cards, medtech, insurance, and other industry-specific business processes. Reusable recipes connect these capabilities around a defined outcome.

The platform that makes it work

- **Shared Context** - Give agents a common enterprise memory to draw on across workflows, systems and teams.
- **Orchestration** - Coordinate multiple agents, models and tools across business and engineering workflows.
- **Security & Governance** - Apply zero-trust security, personal-data protection and controlled tool access. Enforce policies and responsible AI checks during execution, with traceable records and controls for model risk, cost and agent identity.
- **Measurable Execution** - Establish baseline metrics and track delivery, process and operational outcomes. Keep agent runs traceable and reproducible so results can be reviewed.

Open by Design - Work with your choice of language model, development environment and cloud, alongside the enterprise systems already in place.

Success Story

GenAI-Powered Application Modernization for a Global Energy Services Company

The client needed to consolidate legacy applications, digitize paper-based workflows and enable remote field operations. Birlasoft delivered a unified, cloud-native application with offline mobile capabilities, automated DevOps and GenAI across the SDLC.

Resulting in **30%** faster delivery, up to **40–50%** documentation time savings, up to **60%** improvement in initial code completion and **2–3x** faster delivery of complex offline reporting.

Start With One Outcome. Scale From There.

Prioritize a workflow. Baseline what exists today. Deploy the right agents and controls. Measure what changes. Scale what works.
